

Matching Function and Matching Market

Pascal Michailat

<https://www.pascalmichailat.org/t5.html>

Matching function . . . Aggregate function (or production function)

- Simple, well behaved, depends on a few aggregate variables

- Summarize a complex trade process that occurs on most markets

- Complementing of trade requires sellers/buyers to exert effort to trade.

- firms spend time/money on recruiting

- workers spend time/effort searching for job (LinkedIn)

- consumers do market research (Yelp, Google, WineCutter, TripAdvisor)

- firms spend money on marketing, advertising

- With matching function: bilateral monopoly

- can assume a price norm

- can be much more realistic
